

## ASSIGNMENT LESSON 4

1. Report on your set task (Write ½-1 page)
  - Describe the two animals you observed
  - Comment on their condition.
  - Suggest any other investigations which could be undertaken to better determine their problems.
  
2. List as many things as you can that might cause a dog's temperature to go to 40°C.
  
3. What things would you check in a basic/general examination of a domestic dog or cat that has become lethargic and appears to have some tenderness when prodded in the stomach? Discuss what you think would be a recommended course of treatment. (Write 2-3 paragraphs)
  
4. Describe methods used for controlling/restraining animals during an examination. (Write 1 paragraph each)
